TABLE OF CONTENTS

1. Introduction	
1.1 Background information.....	1
1.2 The significance of biodiversity and forest management system in Myanmar... 2	2
1.3 Major threats to Biodiversity	3
1.4 Protected Areas and Forest Protected Areas	4
1.5 Zoning management inTaninthayi Nature Reserve	7
1.6 Development of a buffer zone in theTaninthayi Nature Reserve	8
1.7 Problem Statement	9
1.8 Objectives	13
2. Description of study site	
2.1 Location of Taninthayi Nature Reserve (TNR)	15
2.2 Topography.....	15
2.3 Geology and soil types	16
2.4 Climate.....	16
2.5 Vegetation.....	19
2.6 History of the TNR project and forest management practices in the TNR.....	21
3. Materials and methods	
3.1 Selection of study sites	27
3.1.1 Forest types in the TNR core zone	27
3.1.2 Forest types in the TNR buffer zone	29
3.2 Sampling design	34
3.2.1 Measurement for stand inventory	34
3.2.2 Measurement of plant internal osmotic potential	37
3.2.3 Soil investigation.....	40
3.2.4 Collection of wood samples and their nitrogen isotopes.....	41
3.2.5 Social methods	42
3.3 Data Analysis.....	43

4. Results for the Tanintharyi Nature Reserve Core Zone

4.1 Forest types and land uses	45
4.2 Major threats	45
4.3 Characteristics and forest management history	46
4.4 Composition and Structure of the Primary Forest -1 and Degraded Forest-1 in the TNR Core Zone.....	48
4.4.1 Soil analysis	48
4.4.2 Species area relationship.....	52
4.4.3 Accuracy and error of vegetation assessment.....	53
4.4.4 Tree species composition	55
4.4.5 Species diversity	59
4.4.6 Species similarity	62
4.4.7 Mean diameters	63
4.4.8 Density and basal area	65
4.4.9 Diameter distributions	67
4.4.10 Stand height.....	72
4.4.11 Vertical floristic component	76
4.4.12 Primary versus degraded forests-1 in the core zone.....	78

5. Results for the Tanintharyi Nature Reserve buffer zone

5.1 Forest types and land use.....	80
5.2 Major threats	81
5.3 Demography	81
5.4 Special characterized land-use zones	82
5.5 Socio-economic analysis.....	83
5.5.1 Development cycle of permanent fruit orchards.....	83
5.5.2 Management of fruit orchards and remaining natural forests.....	84
5.5.3 Commercial tree species and their uses	86
5.6 Soil analysis	89

5.7 Structure and diversity of the three different forest types.....	94
5.7.1 Species area relationship	94
5.7.2 Accuracy and error of vegetation assessment.....	95
5.7.3 Tree species composition	96
5.7.4 Coefficient of similarity	103
5.7.5 Forest diversity	105
5.7.6 Mean diameters	108
5.7.7 Density and basal area	109
5.7.8 Diameter distributions	110
5.7.9 Stand height.....	116
5.7.10 Vertical floristic component.....	120
5.7.11 Discussion	121
6. Natural regenerations of the TNR core and buffer zone forests	
6.1 Natural regenerations of the TNR core forests	125
6.1.1 Density of natural regeneration.....	125
6.1.2 Species composition of natural regenerations.....	126
6.1.3 Tree species with and without natural regeneration	130
6.2 Natural regenerations of the TNR buffer zone forests	130
6.2.1 Density and structure of natural regeneration.....	130
6.2.2 Species composition of natural regeneration.....	132
6.2.3 Tree species with and without natural regeneration.....	136
6.3 Pattern of floristic similarity for the natural regeneration.....	137
6.4 Regeneration core zone versus buffer zone.....	138
7. Tree-site matching of three forest types in the TNR buffer zone	
7.1 Problem statement.....	139
7.2 Plant osmotic potentials of the primary moist evergreen forest-2.....	140
7.3 Plant osmotic potentials of the secondary moist evergreen forest-2	144

7.4 Plant osmotic potentials of the degraded moist deciduous forest-2.....	148
7.5 Osmotic stress adaptability of dominant and pre-dominant tree species in three forests of the buffer zone area.....	152
7.6 Discussion.....	156
8. Assessing the salt tolerance of <i>Xylia xylocarpa</i>	
8.1 Introduction	160
8.2 Selection of plant material in the natural habitat	162
8.3 Plants preparation for the greenhouse experiment.....	162
8.4 Plant treatment and soil media preparation	163
8.5 Statistical analysis.....	164
8.6 Results.....	164
8.6.1 <i>Xylia xylocarpa</i> responses to two different media.....	164
8.6.2 Leaf osmotic potentials versus soil osmotic potentials.....	167
8.6.3 Commercial potting soil versus hydroponic gravel media.	168
8.7 Discussion.....	170
9. Tree species classification for light requirements and salt concentrations	
9.1 Tree species' light requirements	172
9.1.1 Light factor in the high land area.....	172
9.1.2 Diameter frequency distributions and light requirements	174
9.1.3 Diameter distribution versus top height, N- content and $\delta^{15}\text{N}$ in the sapwood.....	175
9.1.4 Grouping tree species into different levels of light requirements.....	180
9.2 Diameter distributions versus sapwood density and plant osmotic potentials.	183
9.3 Relationship between sapwood density and the N-content (%) of species.....	190
9.4 Discussion.....	191
10. Conclusion and recommendations	
10.1 Silvicultural approaches for measures and implications for conservation and management	194

10.2 Silvicultural implications for SFM in the Tanintharyi Nature Reserve.....	195
10.3 Sustainable management approaches of the TNR buffer zone forests.....	198
11. Summary.....	203
12. Zusammenfassung.....	212
13. References	222
Appendices.....	246
