Table of contents

Abstract	III
Kurzfassung	IV
Nomenclature	V
1. Introduction	1
2. Fouling on heat exchanger surfaces	3
2.1 Crystallization fouling	5
2.1.1 Nucleation	5
2.1.2 Model contamination $\text{CaSO}_4\text{-H}_2\text{O}$	10
2.1.3 Crystal growth	12
2.2 Quantification of crystallization fouling	16
2.2.1 Thermal fouling resistance	16
2.2.2 Fouling development.....	19
2.3 Fouling influencing parameters	21
2.3.1 Solution composition	21
2.3.2 Operating conditions	22
2.3.3 Heat exchanger surface characteristics	22
2.3.3.1 Surface roughness	23
2.3.3.2 Surface free energy	23
2.3.3.3 Correlating surface free energy parameters to fouling propensities	26
2.3.3.4 Adhesion propensities resulting from molecular interactions	29
3. Experimental setup and analysis	37
3.1 Chemical and thermal stability tests of heat exchanger surfaces ..	37
3.2 Fouling test rig and experimental procedure	38
3.2.1 Measuring thermal fouling resistances	40
3.2.1.1 Flow channel setup	41
3.2.1.2 Flow channel simulation versus experiment	43
3.2.1.3 Local versus integral measures	52
3.2.1.4 Measurement uncertainties for R_f determination	57
3.3 Roughness measurements	60
3.3.1 Stylus instrument	61
3.3.2 Atomic force microscope	62
3.4 Contact angle measurement and surface free energy calculation..	64
3.4.1 Contact angle measurement on $\text{CaSO}_4\text{-2H}_2\text{O}$	66
3.4.2 Calculation of correction factor by Volmer	67

3.5	Scanning Electron Microscope	67
3.6	Diamond-like carbon coatings	69
4.	Experimental results and discussion	72
4.1	Surface roughness of test plates	72
4.2	Chemical and thermal stability of modified heat exchanger surfaces	74
4.2.1	Altering energetic surface properties with base treatment	74
4.2.2	Altering energetic surface properties with acid treatment	77
4.2.3	Altering energetic surface properties at room temperature treatment	78
4.2.4	Altering energetic surface properties with thermal treatment	80
4.2.5	Conclusions on cleaning and thermal stability	81
4.2.6	Air storage impact on energetic surface properties	84
4.2.7	Conditioning of DLC surfaces	85
4.3	Fouling experiments	89
4.3.1	Experimental fouling procedure	89
4.3.2	Hot air conditioning of EP-SICON [®]	90
4.3.3	Water conditioning of DLC surfaces	91
4.3.4	Fouling performance and altering SFE of conditioned surfaces	93
5.	Adhesion propensity of CaSO₄ on DLC coatings	101
5.1	Excess free energy of nucleation	104
5.2	Gibbs free energy of interaction	107
5.3	Total energy of interaction	113
5.3.1	Electrostatic double layer interactions	113
5.3.2	Polar and apolar interactions over altering SFE properties	116
5.3.3	Brownian motion interactions	120
5.3.4	Total energy of interaction and ionic strength	122
5.3.5	Conclusions on total energy of interactions	125
6.	Summary and Conclusions	128
7.	Future prospects	131
8.	References	133
A.	Appendices	143
