Table of contents

1. Introduction	1
1.1 The disease complex of benyviruses in sugar beet.....	1
1.2 <i>Beet soil-borne mosaic virus</i> and <i>Beet necrotic yellow vein virus</i>	2
1.2.1 Taxonomy and molecular biology.....	3
1.2.2 Symptom expression.....	6
1.2.3 Economic importance and control measures of BSBMV and BNYVV in sugar beet	7
1.2.4 Interaction between the two benyviruses BSBMV and BNYVV	8
1.3 Mixed infection of RNA viruses	10
1.3.1 Antagonistic interaction	10
1.3.2 Facilitative interaction.....	12
1.4 Variation in RNA viruses.....	13
1.4.1 Mutation	13
1.4.2 Recombination	14
1.4.3 Reassortment.....	15
1.5 Reverse genetic system: Infectious cDNA full-length clones of RNA-viruses	15
1.5.1 Regulatory elements and construction of infectious cDNA full-length clones.....	16
1.5.2 Inoculation techniques and application of infectious cDNA full-length clones	20
1.6 Plant virus-based vectors	22
1.6.1 Fluorescence labelling of viral vectors.....	23
1.6.2 Mechanism of virus-induced gene silencing (VIGS)	24
1.6.2.1 Application of VIGS.....	26
2. Research objectives.....	28
3. Manuscript I	29
4. Manuscript II	55
5. Manuscript III	75
6. General Discussion.....	92
6.1 Construction of infectious cDNA full-length clones of BSBMV and challenges of the inoculation technique.....	92
6.2 Interaction of BSBMV and BNYVV on the whole plant organism level	96
6.3 Artificial formation of reassortants of BSBMV and BNYVV	98
6.4 Fluorescent labelling and interaction studies	102
6.4.1 Strategies of fluorescent labelling of BSBMV and BNYVV cDNA full-length clones.....	102

6.4.2 Challenges of fluorescent labelling.....	105
6.4.3 Interaction studies of BSBMV and BNYVV on cellular level.....	106
6.5 BSBMV and BNYVV as expression vector	109
7. Summary	112
8. Literature.....	114
Acknowledgement.....	142
Curriculum Vitae	144
