Table of Contents

Summary	III
Zusammenfassung	IV
1. Introduction	1
1.1. Rationale	1
1.2. Objective	2
2. Theoretical Background	4
2.1. <i>Arabidopsis thaliana</i> as important model plant	4
2.2. Rice biotechnology - towards genetically superior transgenic rice	5
2.3. Plant metabolism	9
2.4. Metabolic network modeling	14
3. Material and Methods	28
3.1. <i>Arabidopsis thaliana</i> core metabolism	28
3.2. Computation of elementary flux modes	28
3.3. Integration of omics-data	29
3.4. Plant growth characteristics	30
3.5. Imazapyr treatment	30
3.6. Isotopic labeling reactor	31
3.7. Labeling of <i>Oryza sativa</i> seedlings with $^{13}\text{CO}_2$	37
3.8. Analytics of metabolite labeling and concentration	38
3.9. <i>Oryza sativa</i> core metabolic network	42
3.10. <i>In vivo</i> flux estimation by INST-MFA	43
Results and Discussion	44
4. Metabolic Network Reconstruction	44
4.1. Genome-based metabolic network of <i>Arabidopsis thaliana</i>	44
4.2. Large-scale isotopomer network of <i>Oryza sativa</i>	52
5. <i>In silico</i> stoichiometric network analysis of <i>A. thaliana</i>	58
5.1. Analysis of diurnal physiology by elementary flux modes	58
5.2. Data-integrated analysis of elementary flux mode solution space	71

5.3. Flux-homeostasis and biotechnological impact of plasticity in photophosphorylation	78
5.4. Extending correlation-based target prediction for metabolic engineering strategies to complex networks	81
6. <i>In vivo</i> flux investigation of photoautotrophy in rice seedlings	87
6.1. Development of specialized flux incubator for ¹³ CO ₂ labeling experiments	87
6.2. Experimental setup and data-acquisition	90
6.3. Iterative optimization of network topology	98
6.4. High flux-resolution achieved by comprehensive data coverage	106
6.5. Photoautotrophic metabolism of rice seedlings reveals energy dissipation and redox shuttling through futile carbon cycling	109
6.6. Deepening insights into imidazolinone-herbicide effect on rice	120
7. Conclusion and Outlook	127
8. Symbols and Abbreviations	130
9. Bibliography	134
10. Appendix	158
10.1. Biomass composition of <i>A. thaliana</i> leaves and <i>O. sativa</i> seedling shoots	158
10.2. Anabolic precursor demand for biomass synthesis of <i>A. thaliana</i> leaves and <i>O. sativa</i> seedling shoots	163
10.3. Stoichiometric reaction network of <i>A. thaliana</i> leaves	174
10.4. Isotopomer reaction network of <i>O. sativa</i> seedling shoots	181
10.5. Abbreviations of metabolite names used in the network reconstructions	189
10.6. Translocation of assimilated carbon to the root (<i>O. sativa</i>)	194
10.7. Experimental biomass yield of <i>A. thaliana</i> from literature	195
10.8. Biotechnological potential of <i>A. thaliana</i>	196
10.9. Results of ¹³ C-INST-MFA flux estimation and parameter continuation	200
10.10. Measured pool sizes	219
10.11. Futile cycles imposed by energy dissipation	221
10.12. Stoichiometric reaction network of <i>O. sativa</i> seedling shoots	222
