Contents

Zusammenfassung	1
Abstract	3
1 Introduction	5
1.1 Motivation	5
1.2 Structure of this work	7
2 Theoretical and experimental background	9
2.1 Electrochemical cells	9
2.2 Lithium ion battery	13
2.2.1 Kinetics	16
2.2.2 Growth of dendrites and related literature	18
2.3 Lithium metal battery	20
2.4 Solid polymer electrolytes	25
2.4.1 Ionic conductivity mechanism in SPEs	26
2.4.2 Mechanical properties	28
2.4.3 Electrochemical stability window	30
2.5 Instrumentation and techniques	33
2.5.1 Galvanostatic electrochemical technique	33
2.5.2 Electrochemical Impedance Spectroscopy	33
2.5.3 Cyclic voltammetry	36
2.5.4 Scanning electron microscopy (SEM)	38
3 Lithium deposition in Li-ion and Li-metal cells	39
3.1 Kinetics study to predict Li plating in a Li-ion cell	39
3.1.1 Transport regions	39
3.1.2 Model description	41

3.2	Influence of temperature and electrolyte on Li deposition	45
3.2.1	Material and cell preparation	45
3.2.2	Cell degradation experiments	47
4	Solid polymer electrolytes	51
4.1	Manufacturing of the PEO solid electrolyte	53
4.1.1	Preparation of PEOLiS SPE	53
4.1.2	Pressing and heat pressing	55
4.1.3	Possible additions to the reference-PEOLiS	55
4.2	Manufacturing of the cathode	57
4.2.1	Pressing and heat pressing	59
4.3	Passivation layers	59
4.3.1	Poly(styrene- <i>b</i> -ethylene oxide)	59
4.3.2	<i>In situ</i> polymerization of polystyrene	60
4.3.3	Poly(vinyl alcohol)	61
4.3.4	Lithium aluminum titanium phosphate	61
4.4	Cell assembly	61
4.5	Electro and physiochemical characterization	62
4.5.1	Ionic conductivity	62
4.5.2	Electrochemical Stability	62
4.5.3	Galvanostatic cycling	63
4.5.4	SEM/EDX	63
5	Result and discussion on lithium deposition study in Li-ion and Li-metal cells	64
5.1	Kinetics study to predict Li plating	64
5.1.1	Validation	64
5.1.2	Simulation results	66
5.1.3	Discussion	67
5.2	Influence of temperature and electrolyte on Li deposition	73
5.2.1	Reproducibility of measurements	73
5.2.2	Influence of C-rate	74
5.2.3	Influence of temperature	75
5.2.4	Influence of salt, concentration and temperature	76
5.2.5	Discussion	79

6 Investigation on PEO-based SPEs	84
6.1 PEO/LiTFSI membranes	84
6.1.1 Stand-alone membranes, $r \in \{0.02 - 0.05\}$, not-dry	85
6.1.2 Stand-alone membranes, $r = 0.05$, dry	88
6.1.3 Directly-coated membranes, $r = 0.067$, dry	91
6.2 PEO/LiTFSI/passive-ceramics membranes	96
6.3 Stability versus NMC cathode	99
6.3.1 Blending with Poly(methyl methacrylate)	102
6.3.2 Polymeric interlayer - block-copolymer	105
6.3.3 <i>In situ</i> polymeric interlayer - polystyrene	108
6.3.4 Polymeric interlayer - polyvinyl alcohol	117
6.3.5 Interlayer - lithium aluminum titanium phosphate	120
6.4 Coulombic efficiency	123
6.5 Discussion and conclusion	126
6.5.1 PEOLiS membranes, from preparation to ionic conductivity and electrochemical stability measurements	126
6.5.2 NMC/PEOLiS/Li cells	128
6.5.3 Including interlayers in NMC/PEOLiS interface	129
7 Conclusion	131
