Contents

1 Abstract	1
2 Zusammenfassung	3
3 Introduction	7
4 Carbon Dioxide Reduction to Formic Acid using Molecular Catalysts	9
4.1 Direct Carbon Dioxide Reduction to Formic Acid with Molecular Catalysts and Hydrogen as Reactant	10
4.1.1 Organometallic Catalysts	10
4.1.2 Switchable Systems for Energy Storage	12
4.2 Carbon Dioxide Reduction <i>via</i> Transfer Hydrogenation	15
4.3 Electrochemical Carbon Dioxide Reduction	19
4.3.1 Electrochemical Basics	19
4.3.1.1 Electrochemical Thermodynamics	21
4.3.1.2 Electrochemical Kinetics	22
4.3.1.3 Electrical Double Layer	25
4.3.2 Organometallic Electrocatalysts	26
4.3.2.1 Conceptual Approaches	26
4.3.2.2 Mechanistic Aspects	29
4.3.3 Catalyst Performance	34
4.3.4 Molecular Catalysts for Carbon Dioxide Reduction in Flow Cells .	38
5 Motivation - Bridging the Gap between Reaction Engineering and Molecular Catalysis	41
6 Experimental	43
6.1 Transfer Hydrogenation	43
6.1.1 Transfer Hydrogenation in Glass Vials	43

6.1.2	Transfer Hydrogenation in a Pressure Vessel	44
6.1.3	Sample Preparation	45
6.1.4	Analysis of Transfer Hydrogenation Experiments	45
6.2	Catalyst Testing using Cyclic Voltammetry	47
6.3	From Batch to Flow Cell - Reaction Engineering Aspects	48
6.3.1	Controlled Potential Electrolysis Experiments	50
6.3.2	Equilibrating Pressure for a Semi Open System	56
6.3.3	Re-saturating the Catholyte without Gas-Liquid Interface	58
6.3.4	Flow Field Design	60
6.3.5	Analysis of Controlled Potential Electrolysis Experiments	62
6.3.6	Methodology of Product Analysis using ^1H NMR	64
6.3.7	Calculating the Faradaic Efficiency (FE)	67
6.4	Analysis of the Cathode Surface	68
6.5	List of Chemicals	69
7	Results and Discussion	71
7.1	Transfer Hydrogenation	71
7.1.1	Preliminary Experiments with Acetophenone	72
7.1.2	Substrate Shift from Acetophenone to Carbon Dioxide	72
7.1.3	Adapting the System to Carbon Dioxide as Substrate	75
7.1.4	Optimization of Reaction Conditions	76
7.1.4.1	Temperature and Solvent Composition	77
7.1.4.2	Optimized Catalyst Amount	77
7.1.4.3	Base Concentration	78
7.1.4.4	Carbon Dioxide Pressure	79
7.1.5	Further Variations of the Reaction System	80
7.1.5.1	Rhodium(I)(COD) and (PNNP) Ru^{II} as Catalysts	81
7.1.5.2	Carbonate as Substrate instead of Carbon Dioxide	82
7.1.5.3	Benchmarking against Direct Hydrogenation	83
7.1.5.4	Influence of the Organic Base 1,8-Diazabicyclo[5.4.0]undec-7-en	83
7.1.6	Upscaling to a 400 mL Autoclave Reactor	85
7.2	Catalyst Screening using Cyclic Voltammetry Studies	85
7.3	Electroreduction of Carbon Dioxide under Flow Conditions	93
7.3.1	Cu-Si-MACHO Ph	94
7.3.2	Cobaltocene	95
7.3.3	Dinuclear Iron Catalyst CpFe(dppf)(CO)	95

7.3.4	Lehn Type Catalysts	96
7.4	Investigation of Different Cathode Materials	102
7.4.1	Physical Characterization of Different Cathode Materials	104
7.4.1.1	Laser Scanning Microscopy and Scanning Electron Mi- croscopy Analysis	104
7.4.1.2	Mercury (Hg) Porosimetry	105
7.4.2	Chemical Characterization of Different Cathode Materials	106
7.4.2.1	Energy Dispersive X-Ray Spectroscopy Study of the Cath- ode Surface	107
7.4.2.2	X-Ray Photoelectron Spectroscopy Study of the Cathode Surface	111
8	Conclusion	117
