Contents

| | Page |
|--|------|
| A. Transport in Porous Materials | |
| Simulation of the Microstructure of Cement-Based Materials - 3 D-Simulation of Moisture Transport - <i>M. Koster; W. Brameshuber</i> | 1 |
| Modelling of diffusive transport of salt ions in porous, water- containing building materials and capillary transport behaviour of salt solutions, subject to building material, salt type, concentration and fluid content <i>C. Liebrich, R. Vogt, R. Kriegel, C. Kaps</i> | 19 |
| Concrete Self-Sealing Mechanisms against Penetrating Water <i>P. Rucker-Gramm; R.E. Beddoe</i> | 37 |
| On the motion of internal carbonation layers <i>A. Muntean; M. Böhm; A. Schmidt</i> | 53 |
| Development of a Combined Heat, Moisture, and Salt Transport Model for Unsaturated Porous Building Materials <i>A. Nicolai; G. Scheffler; J. Grunewald; R. Plagge</i> | 67 |
| An Efficient Numerical Solution Method and Implementation for Coupled Heat, Moisture, and Salt Transport: The DELPHIN Simulation Program <i>A. Nicolai; G. Scheffler; J. Grunewald; R. Plagge</i> | 85 |
| Prediction model for the weathering of sandstone under Ambient climate actions <i>E. Kotan; H. Müller</i> | 101 |

B. Microstructure, Crystallization and Hydration

| | |
|---|-----|
| Development of a model for the homogenising description of the deformation behavior of concrete due to sulphate expansion <i>A. Schubert; K.P. Großkurth</i> | 117 |
| A Hybrid Simulation Approach to Simulate Micro-Structural Dynamics in Cement <i>R. Haberkern; H. Emmerich</i> | 133 |
| Model for the Formation of Microstructure during Hydration and the consequences for autogenous shrinkage of paste and mortar <i>R. Nothnagel; H. Budelmann</i> | 149 |
| Modeling the properties of pore solutions in porous building materials <i>K. Linnow; M. Steiger</i> | 167 |
| Phase equilibria in mesoporous materials <i>M. Steiger; K. Linnow</i> | 183 |
| Kinetics of phase changes of salts in porous materials: Crystallization, hydration and deliquescence <i>R.M. Espinosa, G. Deckelmann, L. Franke</i> | 197 |
| Predicting efflorescence and subflorescence of salts <i>R.M. Espinosa, G. Deckelmann, L. Franke</i> | 213 |

C. Corrosion and Degradation

| | |
|---|-----|
| Prediction model for the degradation process of concrete due to the attack of sulphate-bearing water <i>M. Fenchel; H. Müller</i> | 227 |
| Probabilistic concept for durability design of cement-based materials exposed to acid, ammonium, and sulphate solution <i>E. Rigo; F. Schmidt-Döhl; H. Budelmann</i> | 243 |
| Prediction by numerical simulation of corrosion of hardened cement paste and concrete caused by acid <i>C. Gunstmann; L. Franke</i> | 259 |
| Modelling the Evolution of Damage to Concrete by Acid Attack <i>R.E. Beddoe; H. Hilbig</i> | 275 |
| The program systems Astra and Cesa for Cement and Salt Chemistry, Transportprocesses and Corrosion in Concrete and other porous Materials <i>R.M. Espinosa; J. Nicolai; C. Gunstmann; G. Deckelmann; H. Schmidt, L. Franke</i> | 293 |
| Model for the mechanical stress due to the salt crystallization in porous materials <i>R.M. Espinosa; G. Deckelmann; L. Franke</i> | 311 |
| Prediction of stress due to crystallization in a porous material and calculation of the damaging salt concentration <i>S. Kiencke; L. Franke</i> | 327 |
| Extension and Application of the Simulation Programm Transreac to Investigate Debonding of Gypsum Plaster and Concrete <i>M. Heidmann; F. Schmidt-Döhl, E. Rigo</i> | 351 |
| Multi phase and multi scale modelling of frost attack on Cementitious materials <i>J. Kruschwitz; M.J. Setzer</i> | 367 |
| Numerical Simulation of the Frost Resistance of Masonry <i>A. Hinniger</i> | 381 |
| Development of a Simulation Program for the Prediction of a possible ASR-Damage <i>T. Mansfeld</i> | 395 |
