Contents

1	Problem Statement	1
2	State of the Art	3
2.1	Technical Background and Modeling of a Residential Building and its Energy Supply	3
2.1.1	Demand Response	3
2.1.2	Energy Storage	5
2.1.3	Residential Building and Energy Supply System	7
2.2	Research Overview	21
2.2.1	Cost-Driven Use of Demand Response	21
2.2.2	Theoretical Potential and Practical Application of Demand Response	24
2.2.3	Cost-Driven Use of Energy Storage	25
2.2.4	Intermittent Renewable Generation and Energy Storage	26
2.2.5	Cooperation of Consumers	27
2.2.6	Summary of the Research Overview	28
3	Research Goal	29
3.1	Research Questions	29
3.2	Locations of Influence of Demand Response and Energy Storage	30
3.3	Methodology to Assess the Research Questions	31
3.4	Thesis Outline	34

4	Modeling and Examined Cases	35
4.1	Modeling of the Single-Family House	35
4.1.1	Parameters of the Single-Family House	36
4.1.2	Extension of the Energy Hub Model with Demand Response	38
4.1.3	Conversion and Storage Technologies of the Houses in Moderate and Hot Climate	39
4.1.4	Load Demand Curves of the Houses	42
4.1.5	Determination of the Optimal Energy Supply Strategy for the Single-Family House	45
4.2	Modeling of a Group of Houses	47
4.2.1	Model Description	47
4.2.2	Examined Groups of Swiss Houses	49
4.2.3	Determination of the Optimal Energy Supply Strategy for a Group of Houses	51
4.3	Cost Optimization and Energy Prices	52
4.4	Parameters of the Sensitivity Analysis	55
4.5	Optimization Interval and Parameters	57
5	Case Studies	61
5.1	Influence of the Parameters on Energy Costs and Supply Strategy (House in Moderate Climate)	61
5.1.1	Influence of the Electric Demand Response Parameters	61
5.1.2	Influence of the Cycle Efficiency (Electric Storage)	71
5.1.3	Influence of the Available Storage Capacity (Electric Storage)	79
5.1.4	Influence of the Optimization Horizon and the Solution Horizon	82
5.1.5	Influence of the Amount of Local Photovoltaic Electricity	84
5.1.6	Verification of the Results for One Year	92
5.2	Influence of the Parameters on Energy Costs and Supply Strategy (House in Hot Climate)	95
5.2.1	Influence of the Electric Demand Response Parameters	95
5.2.2	Influence of the Cycle Efficiency (Electric Storage)	101

5.2.3	Influence of the Available Storage Capacity (Electric Storage)	103
5.2.4	Influence of the Amount of Local Photovoltaic Electricity	106
5.2.5	Verification of the Results for One Year	112
5.3	Influence of Cooperation, Demand Response and En- ergy Storage on the Energy Costs for a Group of Houses in Moderate Climate	114
6	Discussion	119
6.1	Energy Storage Utilization	119
6.2	Demand Response Application	121
6.3	Impact of the Combination of Demand Response and Energy Storage	121
6.4	Cooperation of Consumers	122
6.5	Influence of Energy Prices and Renewable Generation	123
6.6	Data Availability and Exchange	125
6.7	Socio-Economic Issues	125
7	Summary of Key Results	127
8	Conclusions	131
	List of Figures	133
	List of Tables	137
	Bibliography	139
A	Nomenclature	147
A.1	Latin Symbols	147
A.2	Greek Symbols	152
A.3	Abbreviations	154
B	Assumptions and Simplifications of the Applied House Model	155
C	Comments on the Matlab Implementation	157
C.1	Constraints on Heating and Cooling Power	157
C.2	Interval for Demand Response Balance	159
