## Table of Contents

Summary .....	1
Zusammenfassung.....	4
CHAPTER 1: Mycorrhizal community structure and nutrient supply .....	7
1.1. Mycorrhizal mutualism .....	7
1.1.1. Ectomycorrhizas: functional characteristics .....	7
1.1.2. Ectomycorrhizal communities .....	9
1.1.3. Measuring EM community structures .....	10
1.2. Functions of EM in C and N exchange between plant and soil .....	11
1.2.1. Carbon transfer to EM fungi.....	11
1.2.2. Nitrogen forms and plant availability .....	12
1.2.3. Nitrogen in forest soils and uptake by ectomycorrhizal fungi.....	14
1.3. Occurrence and N requirements of European beech.....	16
1.4. Objectives of the present thesis.....	17
1.5. References .....	18
CHAPTER 2: How accessible is beech litter-derived nitrogen for different ectomycorrhizal fungal species .....	31
2.1. Introduction .....	31
2.2. Materials and methods .....	33
2.2.1. Site description .....	33
2.2.2. Litter and Litterbags .....	33
2.2.3. Field study and sampling design .....	34
2.2.4. Sampling of soil, roots and ectomycorrhizas.....	34
2.2.5. C, N and <sup>15</sup> N analysis and calculations.....	36
2.2.6. Statistical analysis.....	37
2.3. Results .....	37
2.3.1. Root demography and EM colonization.....	37
2.3.2. N and <sup>15</sup> N dynamics in decomposing litter.....	39
2.3.3. <sup>15</sup> N tracer in soil and roots .....	40
2.4. Discussion .....	42
2.4.1. The fate of <sup>15</sup> N released from litter.....	42
2.4.2. Functional diversity of EM with respect to N accumulation.....	44

## Table of Contents

---

2.5. References .....	47
Supplement 2.1 .....	52
CHAPTER 3: Nitrogen turnover in beech ( <i>Fagus sylvatica</i> ) root tips colonized by different ectomycorrhizal fungi under two levels of irradiance and water availability.....	55
3.1. Introduction .....	55
3.2. Materials and methods .....	58
3.2.1. Plant cultivation.....	58
3.2.2. Experimental treatments .....	58
3.2.3. Harvest.....	59
3.2.4. Root analysis and EMF morphotyping.....	60
3.2.5. Collection of root tips for isotope analysis .....	60
3.2.6. Molecular identification of EM fungal species .....	60
3.2.7. EM anatomy .....	62
3.2.8. Isotope analysis.....	62
3.2.9. Calculations and statistical analyses.....	62
3.3. Results .....	63
3.3.1. Root demography and EM community structure are influenced by irradiance and water availability .....	63
3.3.2. Ectomycorrhizal fungal species influence <sup>15</sup> N contents in root tips.....	69
3.3.3. Total N contents in ectomycorrhizal and non-mycorrhizal root tips show a different pattern according to fungal species as compared to <sup>15</sup> N contents .....	71
3.3.4. <sup>15</sup> N to N ratio vary with ectomycorrhizal fungal species and with the growth regime.....	71
3.3.5. <sup>15</sup> N sequestrations in root tips is negatively correlated with fungal mantle .....	74
3.4. Discussion .....	75
3.4.1. EM community structure under shade and drought.....	75
3.4.2. N turnover in EM and NM root tips .....	76
3.5. Conclusions .....	77
3.6. References .....	78
CHAPTER 4: Effects of ectomycorrhizal symbiosis on the nitrogen uptake capacities of young beech ( <i>Fagus sylvatica</i> ) seedlings under drought conditions, influenced by irradiance.....	87
4.1. Introduction .....	87
4.2. Materials and methods .....	90
4.2.1. Experimental design .....	90
4.2.2. Harvest.....	92

## Table of Contents

---

4.2.3. Collection of root tips for isotope analysis .....	92
4.2.4. Analysis of root architecture.....	93
4.2.5. Isotope analysis of plant tissues.....	93
4.2.6. Calculations and statistical analysis .....	94
4.3. Results .....	94
4.3.1. Physiological response to drought.....	94
4.3.3. Growth parameters .....	95
4.3.4. <sup>15</sup> N uptake and partitioning.....	96
4.3.5. Total nitrogen and carbon concentrations .....	99
4.3.6. <sup>15</sup> N, total nitrogen and total carbon amounts in root tips.....	101
4.3.7. Correlation between different fractions of nitrogen ( <sup>15</sup> N and total N) in root tips and plant belowground and aboveground biomass .....	102
4.4. Discussion .....	103
4.5. References .....	106
CHAPTER 5: Girdling affects ectomycorrhizal fungal diversity and reveals functional differences of EMF community composition in a beech forest.....	117
5.1. Introduction .....	118
5.2. Materials and methods .....	119
5.2.1. Site description .....	119
5.2.2. Girdling and sampling scheme .....	121
5.2.3. Root analysis and ectomycorrhiza morphotyping .....	121
5.2.4. ITS-sequencing.....	121
5.2.5. Analysis of sequences.....	122
5.2.6. Carbohydrate analysis.....	123
5.2.7. Calculation of diversity indices and statistical analyses.....	123
5.2.3. Results .....	124
5.3.1. Girdling affects root demography but not EMF colonization of vital roots.....	124
5.3.2. Carbon storage pools are depleted slowly after girdling .....	126
5.3.3. Girdling leads to loss in ectomycorrhizal species .....	129
5.3.4 Girdling affects seasonal fluctuations in diversity and species richness but not in Evenness. ....	133
5.3.5. Diversity is related to root carbohydrate status and the ratio of dissolved organic carbon-to-dissolved organic nitrogen in soil .....	135
5.4. Discussion .....	137

## Table of Contents

---

5.4.1. Recent assimilates as driver of EMF diversity .....	137
5.4.2. Functional ecological significance of diversity .....	138
Supplement 5.2.....	147
Supplement 5.3.....	148
Supplement 5.4.....	149
Supplement 5.5.....	150
Supplement 5.6.....	151
Supplement 5.7.....	152
Supplement 5.8.....	155
Supplement 6.8.....	156
Appendix 1.....	157
Appendix 2.....	168
Declaration.....	180
CHAPTER 4: Effects of ectomycorrhizal symbiosis on the nitrogen uptake capacities of young beech ( <i>Fagus sylvatica</i> ) seedlings under drought conditions, influenced by irradiance.....	180
Acknowledgements.....	181
Curriculum Vitae .....	183
