Table of Contents

Summary	XII
Zusammenfassung	XIII
1. Introduction	1
2. Objectives	5
3. State of Knowledge – <i>Bacillus megaterium</i> as Recombinant Host	6
3.1. Basic physiology and metabolic pathway repertoire of <i>B. megaterium</i>	6
3.2. Genetic engineering	8
3.2.1. Selection markers and knock-out mutants	8
3.2.2. Inducible expression systems	9
3.2.3. Plasmids for enhanced protein recovery and purification.....	10
3.3. Product portfolio of <i>B. megaterium</i>	10
3.3.1. Green fluorescent protein as model system.....	10
3.3.2. Novel proteins of <i>B. megaterium</i>	11
3.4. Basic bioprocess engineering.....	13
3.5. Systems biotechnology for next-level protein production	14
3.5.1. Profiling and systems biotechnology	14
3.5.2. Single-cell analysis	15
3.6. Advanced bioprocess engineering	16
4. Materials and Methods	18
4.1. Strains and plasmids.....	18
4.2. Chemicals.....	19
4.3. Growth media.....	19
4.4. Genetic engineering	21
4.4.1. Preparation of genomic DNA from <i>B. megaterium</i>	21
4.4.2. Preparation of plasmid DNA from <i>E. coli</i>	22
4.4.3. Amplification of DNA by polymerase chain reaction (PCR)	22
4.4.4. Digestion of DNA with restriction endonucleases	23

4.4.5.	Agarose gel electrophoresis	23
4.4.6.	Purification of PCR products and plasmid fragments	24
4.4.7.	Ligation of DNA	24
4.4.8.	Sequencing of plasmid DNA.....	24
4.4.9.	Transformation of <i>E. coli</i> cells by the CaCl ₂ method	25
4.4.10.	Protoplast transformation of <i>B. megaterium</i> cells	25
4.4.11.	Construction of the plasmid pRBB112 for production and secretion of recombinant levansucrase.....	27
4.5.	Cultivation techniques	28
4.5.1.	Strain conservation	28
4.5.2.	Cultivation in deep-well-plates	28
4.5.3.	Cultivation in flower-plates	29
4.5.4.	Cultivation in shake flasks	29
4.5.5.	Cultivation in bioreactor	29
4.6.	Analytical Techniques.....	31
4.6.1.	Cell concentration	31
4.6.2.	Sugars and organic acids	32
4.6.3.	Intracellular amino acids.....	32
4.6.4.	Sodium dodecyl sulfate polyacrylamide gel electrophoresis (SDS-PAGE)	33
4.6.5.	Quantification of GFP.....	33
4.6.6.	Quantification and activity measurement of levansucrase	34
4.6.7.	Flow cytometry	36
4.6.8.	Transcriptomics	37
4.6.9.	Proteomics.....	37
4.7.	Statistical methods.....	38
4.7.1.	One-factor-at-a-time-(OFAT) experiments	38
4.7.2.	Statistical validation of experimental data.....	38
5.	Results and Discussion	39
5.1.	Maintenance of analytic quality	39
5.2.	Basic screening of culture parameters.....	40

5.2.1.	Dissolved oxygen (DO) - concentration	41
5.2.2.	pH-value	42
5.2.3.	Cultivation temperature	44
5.3.	Nutritional requirements	45
5.3.1.	Impact of vitamin supplements	45
5.3.2.	Medium composition	46
5.3.3.	Impact of the carbon source	47
5.4.	Systems-wide analysis of recombinant protein production in <i>B. megaterium</i> on the transcriptome and proteome level	49
5.5.	Recombinant protein production at industrial large-scale	54
5.5.1.	Impact of dissolved oxygen and substrate gradients	54
5.5.2.	Overcoming gradient effects by targeted precursor feeding	59
5.6.	High yield production and secretion of levansucrase	73
5.6.1.	Construction and characterization of a levansucrase producing strain	73
5.6.2.	High cell density levansucrase production based on fructose	74
5.6.3.	High cell density levansucrase production based on glycerol	76
5.6.4.	Levansucrase production using raw glycerol	77
5.6.5.	Product specificity and process evaluation	80
6.	Conclusions and Outlook	85
7.	Abbreviations and Symbols	89
8.	References	94
9.	Appendix	107
