

Hejuan Liu (Autor)

Numerical study of physico- chemical interactions for CO₂ sequestration and geothermal energy utilization in the Ordos Basin, China

Schriftenreihe des Energie-Forschungszentrums Niedersachsen

Energie-Forschungszentrum
Niedersachsen

TU Clausthal

**Numerical study of physico-
chemical interactions for CO₂
sequestration and geothermal
energy utilization in the Ordos
Basin, China**

Hejuan Liu

Promotion an der Technischen Universität Clausthal
Arbeitsgruppe Rock Mechanics in Petroleum Engineering
Prof. Dr.-Ing. habil. Michael Z. Hou

Contents

1. Introduction	1
1.1 The carbon challenge.....	1
1.2 CCS introduction.....	1
1.2.1 CCS motivation	1
1.2.1 CO ₂ capture and geological sequestration	2
1.3 State-of-the-art and progress beyond.....	3
1.3.1 Research scope of CO ₂ geological sequestration.....	6
1.3.2 THMC geo-processes	8
1.3.3 Geological model uncertainties	9
1.3.4 Dynamic simulation model.....	9
1.3.4.1 Multi-phase, multi-component reactive transport simulation (TH ² C).....	11
1.3.4.2 Rock mechanics simulation (THM)	13
1.4 Research objectives, contents and structure	14
2. CO₂ sequestration project in Ordos Basin	16
2.1 CCS project in Ordos Basin of China	16
2.2 Geological characteristics of the Ordos Basin.....	18
2.2.1 Tectonic evolution of the Ordos Basin.....	19
2.2.1.1 Regional tectonic stress fields	23
2.2.2 Sequence stratigraphy and sedimentary facies	24
2.2.3 Hydrogeological characteristics of the Ordos Basin	29
2.2.4 Characteristics of the Upper Paleozoic reservoir formations	33
2.2.4.1 Porosity and permeability.....	33
2.2.4.2 Pore structure.....	35
2.2.4.3 Mineral composition.....	38
2.2.4.4 Mechanical parameters.....	39
2.2.5 Characteristics of mudstone	40
3. Theoretical background of CO₂ sequestration in porous media.....	42
3.1 Feasibility of CO ₂ sequestration.....	43
3.1.1 Mechanisms of CO ₂ sequestration.....	43
3.1.2 CO ₂ sequestration capacity in saline formation.....	47
3.2 Characteristics of porous media	48
3.2.1 Fundamentals.....	48
3.2.1.1 Concepts of volume fractions, porosity and saturation	48
3.2.1.2 Compaction of porous medium	50
3.2.1.3 Compressibility	51
3.2.1.4 Wettability	53
3.3 Multiphase fluid flow	55
3.3.1 Different scales of fluid flow systems	57

3.3.1.1 Fluid flow at basin scale	57
3.3.1.2 Fluid flow at regional scale	57
3.3.1.3 Fluid flow at pore scale	58
3.3.2 Darcy's law.....	59
3.3.2.1 Assumptions in Darcy's law.....	60
3.3.2.2 Mathematical equations.....	61
3.3.3 Relative permeability	62
3.3.3.1 Capillary models (pore-scale network) used in relative permeability	62
3.3.3.2 Empirical models.....	62
3.3.4 Capillary pressure.....	66
3.4 Mathematical model for fluid flow in a porous medium.....	69
3.4.1 Single-phase single component fluid flow [H].....	69
3.4.2 Water-gas two phase flow [H ²]	70
3.5 Mathematical model for coupled hydro-mechanical process	72
3.5.1 Mass balance equations	72
3.5.2 Constitutive laws	73
3.5.3 Failure criteria	74
3.6 Mathematical model for reactive fluid flow.....	76
3.6.1 Mass conservation of chemical components in liquid phase.....	76
3.6.2 Equation of state for CO ₂	77
3.6.3 Chemical reaction equations (Equilibrium and Kinetics).....	77
3.6.3.1 Thermodynamics mechanisms	78
3.6.3.2 Kinetic mechanisms	80
3.6.4 Fluid flow changes by chemical reactions.....	81
4. Simulation of water-CO₂ (two phase) fluid flow in saline formations in the Ordos Basin [H²]	83
4.1 Modeling approach for two phase fluid flow	83
4.2 Numerical model setup and parameters	84
4.2.1 System geometry	84
4.2.2 Boundary conditions.....	85
4.2.3 Initial conditions.....	85
4.2.4 The maximum capacity for CO ₂ in the simulation model	86
4.3 Results and discussion.....	87
4.3.1 Isothermal two phase fluid flow (H ²)	87
4.3.2 Non-isothermal two phase fluid flow (TH ²).....	93
4.4 Sensitivity analysis of CO ₂ sequestration.....	98
4.4.1 Effect of injection strategy	98
4.5.1.1 Comparison of multi-layer and one layer injection strategy	99
4.5.1.2 Effect of injection rate	100

4.4.2 Boundary effect	104
4.4.2.1 Boundary type	104
4.4.2.2 Boundary position	106
4.4.3 Anisotropy of the reservoir permeability.....	109
4.4.3.1Tight sandstone and mudstone	109
4.4.3.2 K_h/K_v	112
4.4.3.3 High permeable layer effect	113
4.4.4 Effect of geological structures.....	115
4.4.5 Capillary pressure and relative permeability effect	118
4.4.5.1Capillary pressure effect.....	118
4.4.5.2 Relative permeability effect	119
5. Simulation of fluid flow and mechanical response in Ordos saline formations [H²M]	122
5.1 Literature review	122
5.2 Numerical model setup and parameters	123
5.2.1 Modeling methods.....	123
5.2.2 Geometry	124
5.2.3 Hydrogeological and mechanical parameters.....	125
5.3 Results and discussion.....	127
5.3.1 Changes of CO ₂ mass fraction in gas and liquid phased due to HM coupling effect	127
5.3.2 Pore pressure changes during and after CO ₂ injection	129
5.3.3 Primary stress state changes during and after CO ₂ injection.....	131
5.3.4 Vertical displacement caused by CO ₂ injection	135
5.3.5 Maximum storage pressure increase	137
6. Simulation of reactive transport of CO₂-fluid in Ordos saline formations [H²C].....	140
6.1 Literature review	140
6.1.1 Previous laboratory-scale experimental studies on CO ₂ -fluid-rock interaction	140
6.1.1.1 Sandstone core sample	143
6.1.1.2 Carbonate core sample	143
6.1.2 Previous modeling studies on CO ₂ -fluid-rock interaction.....	145
6.2 CO ₂ sequestration by chemical reactions	146
6.2.1 Ionic trapping of CO ₂	146
6.2.2 Mineral trapping of CO ₂	146
6.2.3 Dissolution and precipitation sequence of minerals	148
6.3 Modeling approach for reactive fluid flow.....	150
6.4 Numerical model setup for reactive fluid flow.....	151
6.4.1 Initial physical parameters.....	151
6.4.2 Initial mineralogy and aqueous compositions	152
6.4.2.1 Initial mineralogy and aqueous compositions of the reservoir.....	154
6.5 Results and discussion.....	156

6.5.1 Batch simulations: CO ₂ -fluid-rock interactions (CFRI)	156
6.5.1.1 CFRI in Fm.LJG.....	157
6.5.1.2 CFRI in Fm.SQF	158
6.5.1.3 CFRI in Fm.SHZ	160
6.5.1.4 CFRI in Fm.SX.....	161
6.5.2 1D simulation for Fm. LJG sandstone.....	162
6.5.2.1 CO ₂ propagation with time	163
6.5.2.2 Ion concentration changes with time	164
6.5.2.3 Mineral volume fraction changes with time	168
6.5.2.4 Porosity and permeability changes with time.....	170
6.5.2.5 Scaling effect in the near-well region.....	171
6.5.3 2D simulations for a sandstone reservoir representative of the four aquifer formations....	175
6.5.3.1 Gas saturation changes with time	177
6.5.3.2 Ion concentration changes with time	178
6.5.3.3 Mineral volume fraction changes with time	182
6.5.3.4 Porosity and permeability changes with time	187
7. Case study of CO₂–aided hydrothermal system	189
7.1 Characteristics of hydrothermal systems.....	189
7.1.1 H ₂ O-based hydrothermal system	193
7.1.2 CO ₂ -based hydrothermal system	195
7.2 Numerical model set up.....	198
7.2.1 System geometry	198
7.2.2 Initial and boundary condition.....	199
7.3 Results and discussion.....	199
8. Site selection criteria for CO₂-aided hydrothermal production	206
8.1 Site suitability evaluation	206
8.1.1 Evaluation processes	206
8.1.2 Site selection criteria	208
8.1.2.1 Basin-scale.....	208
8.1.2.2 Field-scale	209
8.1.2.3 Target formation-scale	209
8.1.2.4 Engineering operation-scale	209
8.1.3 Screening and ranking methods.....	214
8.2 Examples: basin-scale suitable site selection in China.....	215
9. Conclusions	220
9.1 Geological characteristics of the Ordos Basin.....	220
9.2 Multiphase, multi-component fluid flow in porous media	221
9.3 Simulation studies of CO ₂ -water two phase fluid flow in deep saline formations	221
9.4 Coupled hydro-mechanical effect in the pilot CCS project of the Ordos Basin.....	222
9.5 Simulation studies on CO ₂ -water-rock interactions for saline formations of the Ordos Basin .	223
9.6 Simulation studies of hydrothermal production: CO ₂ as a pressure-driven fluid	225

9.7 Suitable site selection criteria and workflow for CO ₂ -aided hydrothermal system.....	227
References	229
Appendix	250
A1.1 Properties of CO ₂	250
A1.1.1 Physical properties of CO ₂	250
(1) Phase state of CO ₂	250
(2) Density, vapor pressure, viscosity, enthalpy of CO ₂	250
(3) Solubility of CO ₂	252
A1.1.2 Chemical properties of CO ₂	253
(1) pH on the transformation of H ₂ CO ₃ hydrolysate	254
(2) pH changes caused by the CO ₂ concentration in water	254
(3) P _{CO₂} on the dissolution of minerals.....	255
