## Table of contents

<b>Table of contents .....</b>	<b>I</b>
<b>Abbreviations.....</b>	<b>V</b>
<b>1. Introduction.....</b>	<b>1</b>
<b>1.1 Plant drought stress responses .....</b>	<b>2</b>
1.1.1 The soil-plant-atmosphere continuum.....	2
1.1.2 Morphological aspects of drought stress.....	3
1.1.3 Physiological and biochemical aspects of drought stress.....	4
1.1.4 Molecular aspects of drought stress .....	7
<b>1.2 Options to increase crop yield under water scarcity .....</b>	<b>12</b>
1.2.1 Farming approaches .....	12
1.2.2 Remote Sensing.....	13
1.2.3 Breeding approaches .....	14
1.2.4 Chemical induction of drought tolerance.....	15
<b>1.3 Insecticides with physiological side effects.....</b>	<b>17</b>
1.3.1 Neonicotinoids.....	17
1.3.2 Flupyradifurone – a butenolide insecticide.....	20
<b>2. Objectives.....</b>	<b>25</b>
<b>3. Materials and Methods .....</b>	<b>27</b>
<b>3.1 Drought stress-mitigating effects of FPF under field conditions.....</b>	<b>27</b>
3.1.1 Trial site and experiment design .....	27
3.1.2 Data collection and analysis.....	30
<b>3.2 Identification of conditions and key requirements for drought stress-mitigating effects of FPF in the greenhouse.....</b>	<b>32</b>
3.2.1 Plant material and growing conditions .....	32
3.2.2 Physiological effect of FPF under stress-free conditions .....	32
3.2.3 Potential of different FPF dose rates to mitigate drought stress in spring wheat.....	34
3.2.4 Stress-mitigating effects of FPF at different growth stages .....	35
3.2.5 Stress-mitigating effects of FPF at different levels of drought stress.....	35
3.2.6 Stress-reducing effects of FPF after different application timings.....	36
3.2.7 Drought stress-reducing effects of FPF in different spring wheat cultivars.....	36
3.2.8 Trial repeats and statistical analysis .....	36
<b>3.3 Metabolic fate of radiolabeled FPF in well-watered and drought-stressed spring wheat .....</b>	<b>37</b>
3.3.1 Experimental setup.....	37
3.3.2 Metabolite extraction .....	38

3.3.3 Radioactivity measurements of liquid and solid samples.....	39
3.3.4 Detection of FPF-derived metabolites using radio-HPLC .....	39
3.3.5 Detection of 6-chloropyridinyl-3-carboxylic acid (6-CPA).....	39
3.3.6 Screening for 6-chloro-2-hydroxypyridinyl-3-carboxylic acid (2-HOCPA) .....	40
3.3.7 Analysis of HPLC-profiles and identification of metabolites.....	42
<b>3.4 Potential involvement of FPF in nicotinic acid-dependent NAD salvage reactions in spring wheat .....</b>	<b>42</b>
3.4.1 Experimental setup.....	42
3.4.2 Detection of [ <sup>14</sup> C]-NAD in spring wheat and <i>Arabidopsis thaliana</i> .....	43
3.4.3 HPLC ESI-MS analysis of wheat NAD extracts .....	45
3.4.4 Potential involvement of [pyridine-2,6- <sup>14</sup> C]-flupyradifurone in NAD salvage reactions ..	45
3.4.5 Drought stress-reducing potentials of FPF and IMD lacking the chloropyridinyl moiety .....	45
<b>3.5 Activity of antioxidant enzymes in spring wheat.....</b>	<b>46</b>
3.5.1 Experimental setup and enzyme extractions .....	46
3.5.2 Protein quantification.....	47
3.5.3 Catalase assay.....	48
3.5.4 Peroxidase assay .....	48
3.5.5 Ascorbate peroxidase assay .....	49
3.5.6 Superoxide dismutase assay .....	49
3.5.7 Calculation and statistical analysis of enzyme activities .....	49
<b>3.6 Determination of ABA and SA contents .....</b>	<b>50</b>
3.6.1 Plant material and phytohormone extraction.....	50
3.6.2 Quantitation and statistical analysis of ABA and SA contents .....	51
<b>3.7 Microarray analysis .....</b>	<b>51</b>
3.7.1 Design of a custom 3'IVT wheat array .....	51
3.7.2 Plant material, RNA isolation and quality assessment.....	54
3.7.3 RNA and microarray processing .....	55
3.7.4 Microarray data analysis .....	55
3.7.5 Real-time qRT-PCR validation of microarray data.....	58
<b>4. Results.....</b>	<b>59</b>
<b>4.1 Drought stress-mitigating effects of FPF under field conditions.....</b>	<b>59</b>
4.1.1 General observations .....	59
4.1.2 Grain yield analysis .....	61
4.1.3 NDVI analysis of selected non-irrigated plots .....	64
<b>4.2 Identification of conditions and key requirements for drought stress-mitigating effects of FPF in the greenhouse.....</b>	<b>66</b>
4.2.1 Physiological effects of FPF under stress-free conditions .....	66
4.2.2 Dose-finding and stress-reducing effects of FPF at different crop stages .....	67
4.2.3 Stress-reducing effects of FPF at different levels of drought stress .....	68

4.2.4 Stress-reducing effects of FPF at different application timings.....	70
4.2.5 Confirmation of FPF-induced biomass increases under moderate drought stress.....	72
<b>4.3 Metabolic fate of FPF in well-watered and drought-stressed spring wheat and identification of bioactive metabolites.....</b>	<b>73</b>
4.3.1 Metabolization of FPF and detection of 6-CPA in spring wheat.....	73
4.3.2 Screening for 6-chloro-2-hydroxypyridinyl-3-carboxylic acid (2-HOCPA) in FPF-treated spring wheat.....	81
<b>4.4 Potential involvement of FPF in wheat NAD salvage reactions .....</b>	<b>82</b>
4.4.1 Detection of nicotinic acid dependent NAD salvage reactions in spring wheat and <i>A. thaliana</i> .....	82
4.4.2 Involvement of FPF and 6-CPA in wheat NAD salvage reactions .....	84
4.4.3 Drought stress-mitigating potentials of de-chlorinated FPF (BCS-1) and IMD (BCS-2) in comparison to standards .....	84
<b>4.5 Effect of FPF on the wheat antioxidant defense system under well-watered and drought conditions.....</b>	<b>86</b>
4.5.1 Early responses of APX, CAT, POX and SOD towards FPF and IMD treatment.....	86
4.5.2 Late responses of APX, CAT, POX and SOD towards FPF and IMD treatment .....	87
<b>4.6 Impact of FPF on SA and ABA contents in well-watered and drought-stressed spring wheat .....</b>	<b>88</b>
<b>4.7 Microarray analysis of well-watered and drought-stressed spring wheat after treatment with FPF .....</b>	<b>89</b>
4.7.1 Quality and homogeneity of microarray data .....	89
4.7.2 Transcriptional response of spring wheat towards drought stress.....	91
4.7.3 FPF-induced changes in the transcriptional response of spring wheat .....	107
4.7.4 Validation of microarray data.....	125
<b>5. Discussion.....</b>	<b>127</b>
<b>5.1 Drought stress-mitigating effects of FPF under field conditions.....</b>	<b>127</b>
5.1.1 Field trial design .....	127
5.1.2 Grain yield in irrigated and non-irrigated fields.....	128
5.1.3 Remote sensing for in-season crop performance measurements .....	130
5.1.4 Screening for FPF-induced drought tolerance and impact of dose rate and spray timing .....	131
<b>5.2 Identification of conditions and key requirements for drought stress-mitigating effects of FPF and IMD in the greenhouse .....</b>	<b>133</b>
<b>5.3 Metabolic fate of FPF in well-watered and drought-stressed spring wheat.....</b>	<b>136</b>
5.3.1 General aspects of pesticide metabolism in plants .....	136
5.3.2 Metabolization of FPF in spring wheat and screening for 2-HOCPA.....	138
<b>5.4 Potential involvement of FPF in wheat NAD salvage reactions .....</b>	<b>140</b>
5.4.1 Confirmation of salvage reactions and involvement of FPF.....	140
5.4.2 Drought stress-reducing potentials of FPF and IMD lacking the chloropyridinyl moiety .....	141

<b>5.5 Molecular and biochemical mechanisms of FPF-induced drought tolerance in spring wheat .....</b>	<b>142</b>
5.5.1 Early molecular response of spring wheat towards progressive soil drying .....	142
5.5.2 Molecular response of spring wheat towards drought stress .....	143
5.5.3 Early molecular response of spring wheat after FPF treatment.....	147
5.5.4 Molecular response of FPF-treated spring wheat towards moderate drought.....	150
<b>6. Summary .....</b>	<b>155</b>
<b>6.1 Summary .....</b>	<b>155</b>
<b>6.2 Zusammenfassung.....</b>	<b>157</b>
<b>7. References .....</b>	<b>159</b>
<b>8. Annex.....</b>	<b>185</b>
<b>8.1 Field trials.....</b>	<b>185</b>
8.1.1 Climate statistics for the Crop Diversification Centre South, Brooks, Alberta, Canada .....	185
8.1.2 Activity of different FPF dose rates against important aphid species in cereals.....	186
8.1.3 Treatment map and comparisons for irrigated plots .....	187
8.1.4 Treatment map and comparisons for non-irrigated plots .....	188
8.1.5 NDVI curves of irrigated treatments (Greenseeker <sup>TM</sup> ) .....	189
8.1.6 NDVI curves of non-irrigated treatments (Greenseeker <sup>TM</sup> ) .....	191
8.1.7 NDVI curves obtained from aerial imaging – non-irrigated plots.....	193
8.1.8 Block-specific grain yield of irrigated and non-irrigated Local Standard controls .....	194
8.1.9 Additional field trials in Europe and North America.....	195
<b>8.2 Metabolism studies .....</b>	<b>196</b>
8.2.1 HPLC profiles ([ <sup>14</sup> C]-track) of well-watered and drought-stressed P- and F-label-treated wheat plants.....	196
8.2.2 HPLC profiles of digested 14 dat samples after P-label treatment .....	198
8.2.3 Identification of 2-HOPCA in P-Label-treated, digested, 14 dat drought samples .....	199
8.2.4 TLC and spectral mass patterns of wheat NAD extracts .....	201
<b>8.3 Gene expression profiling .....</b>	<b>205</b>
8.3.1 Drought-induced changes in SL 0-treated spring wheat.....	205
8.3.2 FPF-induced changes in spring wheat.....	208
8.3.3 Selection of a reference gene for qRT-PCR validation .....	216
<b>Danksagung .....</b>	<b>217</b>
<b>Eidesstattliche Versicherung .....</b>	<b>219</b>
<b>Lebenslauf.....</b>	<b>221</b>
