

Daniel Podmirseg (Autor)

Contribution of Vertical Farms to Increase the Overall Energy Efficiency of Cities

DANIEL PODMIRSEG

CONTRIBUTION OF VERTICAL FARMS TO INCREASE THE OVERALL ENERGY EFFICIENCY OF CITIES

Table of Contents

Book review by Prof. Dickson Despommier	11
Book review by Prof. Nirmal Kishnani	13
I. Preface	15
II. Acknowledgements	19
III. Synopsis	21
IV. Abstract	22
1. Introduction	35
2. Landuse, Biocapacity and Energy Consumption	41
2.1. Compiling a status quo model of traditional agriculture	41
2.2. Land requirement for daily coverage of essential nutritional value for the human body	43
2.2.1 Food Balance Sheets	49
2.2.2 World land masses and the ratio of land used for agricultural production .	57
2.2.3 Biocapacity of the Earth	61
2.3. Energy Consumption	71
2.3.1 Looking back a century	71
2.3.2 Energy and the Food Supply Chain	75
2.3.3 Sketching the Big Picture of World Energy Consumption by the Food System	93
2.3.4 Landuse, Energy Consumption and Biocapacity - Resumée	95
3. The Vertical Farm Reference Models	99
3.1. Goals and Process	99
3.2. Evaluation of components - Modelling a Vertical Farm - Prototype	101
3.2.1 Cultivation Methods - Overview and Evaluation of the advantages and challenges	101
3.2.2 Production Methods - Building footprint, cultivation area and soil- based-area-equivalent	111
3.3. Typological comparison of existing Vertical Farms	126

4. Vertical Farm - Substitution of Natural Growth Factors 163

4.1.Goals and methods	163
4.2.Introduction and basics	165
4.2.1 Photometry and Radiometry.	165
4.2.2 Light for Plants - Light for humans	170
4.3.The Tomato - <i>Lycopersicon esculentum</i> (Mill.).	179
4.3.1 General Data - Origin and Distribution	179
4.3.2 <i>L. esculentum</i> and Light	184
4.3.2 <i>L. esculentum</i> and Photosynthesis	186
4.3.4 Factors affecting the rate of Photosynthesis	187
4.3.5 Temperature and other Growing Conditions	191
4.3.5 Growing media and plant density	195
4.4. Setting up Vertical <i>L. esculentum</i> - Farm	199
4.4.1 Light availability in Vienna and Greenhouse Practises	199
4.4.2 Artificial Lighting - General Data	202
4.4.3 Artificial Lighting - LED LumiGrow 325 and LumiGrow 650	205
4.4.4 <i>L. esculentum</i> - Organization of the vertical cultivation area	209

5. The Vertical Farm - Simulationmodel. 215

5.1.Introduction	215
5.2.Goals	217
5.3.Method	219
5.3.1 Simulation Software	219
5.3.2 Location	221
5.3.3 Parametric Simulation Building.	225
5.4.Lighting Parameters	235
5.4.1 Lighting demand and Lighting schedule.	235
5.5.Heating Parameters	239
5.5.1 EnergyPlus Material Parameters	239
5.5.2 EnergyPlus Simulation Parameters	247
5.5.3 Limitations and Restrictions.	248

5.6. Lighting Demand - Simulation Results	249
5.6.1 Annual Results	249
5.6.2 Lighting Schedule	249
5.6.3 VF 32 - Lighting Demand - Daysim Results.	255
5.6.4 VF 14 - Lighting Demand - Daysim Results	259
5.6.5 VF 7 - Lighting Demand - Daysim Results	263
5.7. Heating Demand - Simulation Results.	267
5.7.1 VF 32 - Heating Demand	267
5.7.2 VF 14 - Heating Demand	277
5.7.3 VF 7 - Heating Demand.	290
5.8. Annual Simulation Results - Discussion	297
5.8.1 Total Primary Energy Supply for the Vertical Farms	303
5.8.2 Vertical Farming and Land use	307
5.8.3 Energy Land - Resumée.	309
6. Conclusio	315
6.1. From Modernism to Sustainism	315
6.2. Vertical Farming and Energy Consumption.	318
6.3. Vertical Farming and Land use	321
6.4. Final Considerations	323
V. List of Figures	331
VI. List of Tables	339
VII. List of Abbreviations	343
VIII. Bibliography	349
IX. Nomenclatura	363
X. Appendix	379
Impressum	391
